

EFFULGENT MEDICAL AESTHETICS & WELLNESS

BOTOX®, XEOMIN® AND DYSPORT® TREATMENT:

BEFORE YOUR APPOINTMENT

- Please arrive with no makeup in the treatment area. If you arrive with makeup, please be aware that we will ask that you remove it. We would be happy to offer a complimentary application with our mineral makeup post treatment.

THE DAY OF YOUR APPOINTMENT

- The treatment areas will be wiped with a cleanser and alcohol.
- Pre-treatment photos will be taken.

AFTER YOUR APPOINTMENT

- For the first 4 hours after treatment, keep your head upright.
- Do not apply pressure to or massage the treatment area.
- Pinpoint bleeding may occur and will resolve quickly.
- Rarely, patients may develop mild bruising and/or sensitivity around the injection site. This will resolve within the first week after treatment.
- Any immediate redness or swelling will subside within an hour and may be covered with makeup.

WHAT TO EXPECT

- Rarely, transient headaches are reported. Tylenol may be taken as needed. This is not an indication that each treatment will result in this experience. In fact, Botox injections are indicated for relief of chronic headaches and migraine.
- Your results will appear gradually over the period of 3-10 days.
- Eyebrows and/or eyelids may feel, and even appear, heavy for up to 1 week after a brow lift. This symptom will soon correct into a measurable lift. However, if symptoms persist past 2 weeks, please call the clinic for immediate follow up.

If you have any questions or concerns, please contact us at 970-343-6933.
